

Installation Model

**Higher Brightness Images, Reliable Operation,
Flexible, For Professional Use**

PLC-XM150/XM150L

Brightness of 6,000 lumens

PLC-XM100/XM100L

Brightness of 5,000 lumens

Installation Model

Advertising and Cinema-Advertising

Educational Use

Showrooms and Business Use

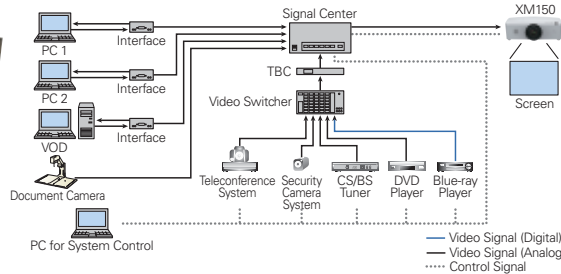

Exhibitions, Event and Amusement

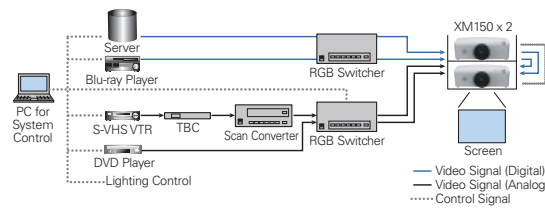

Responding to a Host of Large-Screen Needs

Conventions and Other Events

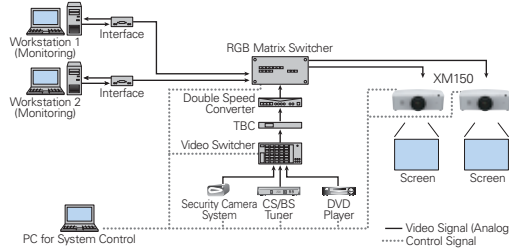

Project crisp, sharp images from a variety of sources - PCs, document cameras, Blu-ray Player and more. With the PLC-XM150's high output and brightness, there's no need to dim the room lights - so viewers can read handouts and take notes comfortably during the presentation. Using a PC gives you total control over image source switching, for easy, flexible large-screen presentations.

Theaters and Halls

Stack two PLC-XM150 units, and you can project images from high-definition sources onto a large screen at an even higher brightness level. Using a system control PC, all facets of the presentation - from start-up and brightness adjustment to image source switching - can be handled automatically.

Monitor Control

You can configure a large-screen monitor system by using multiple PLC-XM150's in a rear projection system to project images onto a multi-screen display. Use it to reproduce complex visual information, such as network control schematics, maps, and images from surveillance cameras.
